

ABSTRACT OF THE DISCLOSURE

Disclosed herein are compositions comprising, in an aqueous medium, such as in a physiologically acceptably aqueous medium, at least one surfactant, at least one ingredient chosen from cyclodextrins and derivatives thereof, and at least one crosslinked copolymer comprising at least one methacrylic acid and at least one C₁-C₄ alkyl acrylate unit, wherein the composition may further comprise at least one conditioner and the compositions are used as, for example, rinse-out products, such as for washing and/or conditioning keratinous materials. Also disclosed are methods of making these compositions, methods of treating keratinous material using the compositions, and the use of the at least one crosslinked copolymer comprising at least one methacrylic acid unit and at least one C₁-C₄ alkyl acrylate unit as an agent for suspending the complex formed by at least one ingredient chosen from cyclodextrins and derivatives thereof and at least one surfactant.
